

## Practice-Based Interventions Addressing Concomitant Depression and Chronic Medical Conditions in the Primary Care Setting: Comparative Effectiveness Review Number 75

Filesize: 1.19 MB

### ***Reviews***

*It is one of the best books. Indeed, it really is a play, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.*

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 280 pages. Dimensions: 11.0in. x 8.5in. x 0.6in. The World Health Organization has identified the integration of mental health into primary care as the most salient means of addressing the burden of mental health conditions, noting its urgent importance. In the United States, half of the care for common mental health disorders is delivered in general medical settings, emphasizing the vital role that primary care providers play in the diagnosis and treatment of these disorders. Common mental health conditions, such as depression and anxiety, are found in up to 10 percent of primary care patients, and these conditions often coexist with chronic medical conditions. Accordingly, considerable interest has been expressed in improving the recognition and management of mental health conditions, especially depression, within primary care. Specifically, interest is emerging about whether treatment of common mental health conditions in primary care can improve both mental health and chronic medical outcomes. The arena of mental health and primary care is moving from consideration of single conditions and their outcomes to more real-world, complex-care paradigms. However, to date, no synthesis of the evidence on practice-based interventions accounts for the primary care patient with multiple chronic conditions and examines both mental health and chronic medical outcomes simultaneously. Despite the prevalence and importance of other mental health conditions in the primary care setting, especially anxiety, substance use, and psychotic disorders, our preliminary review of the literature revealed that only depression has the evidence base necessary to meet eligibility criteria for a comparative effectiveness review. The purpose of this report, therefore, is to summarize the available evidence on the effectiveness of practice-based interventions aimed at adult primary care patients with concomitant depression and chronic medical diagnoses. We believe this will add to...
